(54) **Title:** SYSTEMS, METHODS, AND COMPUTING PLATFORMS FOR MANAGING NETWORK ENABLED SECURITY CODES

FIG. 5

(57) **Abstract:** Various embodiments of the present disclosure provide techniques for facilitating a credential-less exchange over a network using a plurality of identifier mappings, member interfaces, and security code tuples that are tailored to an ephemeral key. The techniques may include receiving a secured interaction request and issuing or enabling a previously issued universally unique ephemeral key (UUEK) in response to the secured interaction request. The techniques may include validating a user, instrument, or UUEK and, in response, storing a secured event for the user, instrument, or UUEK and providing a secured interaction response indicative of the secured event. The techniques may include subsequently receiving an exchange request for executing a value-based exchange using the UUEK and facilitating the exchange request based at least in part on the secured event.
