(54) Title: STOPPER FOR A MEDICAL INJECTION DEVICE

FIGURE 2

(57) Abstract: The present invention relates to a stopper (1) configured to be positioned inside a barrel (101) of an injection device (100) for injecting at least one composition, said stopper (1) comprising: - a gasket (10) comprising a proximal end (11), a distal end (12), a lateral wall (13), and a through hole (14, 71) extending from the proximal end to the distal end, - an insert (50) inserted in the through hole (14, 71), wherein the stopper is adapted to deform between: - a closed configuration wherein the gasket (10) cooperates with the insert to hermetically close the through hole (14, 71), for preventing flow of the composition between the proximal end (11) and the distal end (12) of the gasket (10), and - an open configuration wherein the gasket (10) cooperates with the insert to open a fluidic pathway in the through hole (14, 71) between the proximal end (11) and the distal end (12) of the gasket (10) for allowing flow of the composition.
