(54) Title: PLASTIC BUCKET AND LID

(57) Abstract

A plastic bucket includes at least one undercut (202) adjacent an upper end of the bucket defined by a bucket wall which extends upwardly and inwardly along a diagonal path. An annular, vertical section (204) may be provided at the upper end of the diagonal path. Above the vertical section, the bucket wall extends radially outwardly to create an annular, horizontal flange (206). In addition, an uppermost annular rim (208) may extend upwardly from the horizontal flange and be located approximately midway between inner and outer radii of the flange.
