

Abstract

Method, electronic device, and storage medium to establish social network connections

This application is applicable to the field of computer communication technology, and it provides a method to establish social network connections, which includes the following: A verification request from the first terminal is received, and such verification request includes the current location information of the first terminal and the identifying information of the first venue; in response to the verification request, the second location information of the described first venue is acquired based on the identifying information. If the distance between the first terminal and the second location information is determined to be shorter than the first preset distance based on the current location information and the second location information, the personal information of the first user in the first terminal is acquired, and the said first user is logged in the virtual first venue corresponding to the identifying information; the personal information of one or multiple second users is sent to the first terminal; in response to the selection request sent by the first terminal, the target terminal is confirmed; the selection request includes the selection results of the personal information of one or multiple second users; and a communication connection between the first and target terminals is established.
