

ABSTRACT

Provided are a live broadcast method and apparatus, a computer device, and a storage medium. The live broadcast method is applied to a virtual application, which is configured to display a virtual scene and play first audio data. The method includes generating a first user code for the
5 virtual application; acquiring a second user code from a live broadcast platform, where the first user code is bound to the second user code; logging in to the live broadcast platform according to the second user code, so as to open a live broadcast room bound to the second user code; and sending live broadcast stream data to the live broadcast platform for playing in the live broadcast room, where the live broadcast stream data includes the virtual scene displayed by the
10 virtual application, the first audio data played by the virtual application, and second audio data recorded by a microphone.
