(54) **Title:** PATIENT STRATIFICATION AND DETERMINING CLINICAL OUTCOME FOR CANCER PATIENTS

Fig. 8

(57) **Abstract:** In a first aspect the present invention is directed to a method of generating a scheme allowing classification of a cancer of an individual patient for estimating a clinical outcome for said patient. It also refers to a method of estimating a clinical outcome of a patient suffering from epithelial ovarian cancer (EOC). The present invention also refers to a method of determining whether the epithelial mesenchymal score of a patient suffering from a cancer can be changed by administering an EMT reversal agent to increase patients susceptibility for an anti-cancer treatment.
