Claims

1. An electronic audio product supporting the interactive interconnected system, wherein the electronic audio product supporting transmit-receive of a audio information signal of the interactive interconnected system is characterized in that

the interactive interconnected system comprises an electronic reading device and an electronic transmitter-receiver;

the audio information signal is formed by associated data and audio data;

the associated data is a preset URI (Uniform Resource Identifier);

the electronic reading device is provided with a combination data reception circuit, a combination data decomposition circuit and a transmission circuit; the combination data reception circuit is configured to receive the audio information signal; the combination data decomposition circuit is configured to decompose the audio information signal into audio data and associated data, the decomposed associated data is transmitted to the electronic transmitter-receiver via the transmission circuit;

the electronic transmitter-receiver is provided with an associated data reception circuit, an associated data transmission circuit and a central processing unit (with memory);

the associated data reception circuit is equipped with a short-distance signal transmission-reception circuit; and

the electronic transmitter-receiver is configured to control transmit-receive of the associated data of the decomposed audio information signal, receive the associated data decomposed by the transmission circuit of the electronic reading device, transmit the associated data to an external information data storage Center via a remote Wireless technology, and quickly call out an associated electronic file.

2. The electronic audio product supporting the interactive interconnected system of claim 1, wherein

the electronic reading device is provided with the combination data reception circuit, the combination data decomposition circuit, the transmission circuit, and a CPU (Central Processing Unit) module, which are embedded into the electronic audio product supporting the interactive interconnected system; and

the electronic transmitter-receiver is provided with an associated data reception circuit, an associated data transmission circuit and a central processing unit (with memory), which are embedded into a communication terminal product supporting interactive interconnected system.

3. The electronic audio product supporting the interactive interconnected system of claim 1, wherein

the combination data reception circuit, the combination data decomposition circuit, the transmission circuit and the CPU module of the electronic reading device, as well as the associated data reception circuit, the associated data transmission circuit and the central processing unit module (comprising the memory) of the electronic transmitter-receiver are embedded into the electronic audio product supporting the interactive interconnected system.

4. The electronic audio product supporting the interactive interconnected system of claim 1, wherein

the electronic reading device is provided with the combination data reception circuit, the combination data decomposition circuit, the transmission circuit, and a CPU module board, which are placed in a small mobile box and connected with the electronic audio loudspeaker system supporting the interactive interconnected system.

5. The electronic audio product supporting the interactive interconnected system of claim 2 or 3 or 4, wherein

the transmission circuit of the electronic reading device is equipped with the short-distance signal transmission-reception circuit;

the combination data decomposition circuit of the electronic reading device is configured to decompose the audio information signal into the audio data, the associated data and the like;

the media information is decomposed into audio information data, the audio information data is transmitted to a digital system for processing and then the audio information data is transmitted to related device for use; and

the decomposed associated data is transmitted by the transmission circuit and the equipped short-distance signal transmission-reception circuit.

6. The electronic audio product supporting the interactive interconnected system of claim 1, wherein

the electronic transmitter-receiver is provided with an association operation key supporting the interactive interconnected system.

7. The electronic audio product supporting the interactive interconnected system of claim 1, wherein

the electronic transmitter-receiver is provided with a mobile association operation key supporting the interactive interconnected system, which is operated remotely.

8. The electronic audio product supporting the interactive interconnected system of claim 1, wherein
