

Abstract

The present invention relates to an attachment device (1) to attach a glass pane (2) at a wall (3), at a sub-structure fixed to a building or the like, whereby the mounting (5) supporting the
5 glass pane (2) has a partially limited three-dimensional articulated support at the clamping fitting (4). The invention concentrates to the fact that the mounting (5) presents a holding tenon (6) that can be secured at the clamping fitting (4), which tenon's exterior free end (7) is connected via a
10 stiffening articulation (8) with a compensating axle (9), which itself is connected via a stiffening articulation (11) with an adapter connectable to a wall (3) or the like.
