

ABSTRACT

To provide a building wall constructed in the vicinity of a building member constructed in advance, thereby facilitating the fastening of an underlay face member and an overlay face member included in the building wall.

A building wall 100 includes an underlay 20 connected to a plurality of studs 10, an intermediate layer 30 connected to the underlay 20, and an overlay 40 connected to the intermediate layer 30, a building member 81 independent of the building wall 100 is installed where front surfaces of overlay face members 41 are, the front surfaces being opposite to rear surfaces thereof facing intermediate layer face members 31, underlay face members 21 are fastened to the studs 10 by first fixing members 50, the intermediate layer face members 31 are fastened to the underlay face members 21 by third fixing members 60, and the overlay face members 41 are fastened to the intermediate layer face members 31 by fourth fixing members 70, and fastening positions of each of the first fixing members 50, the third fixing members 60, and the fourth fixing members 70 are set in a region avoiding the building member 81.
