

Figure 1

Diagram for the assay for measuring protein binding to a solid surface

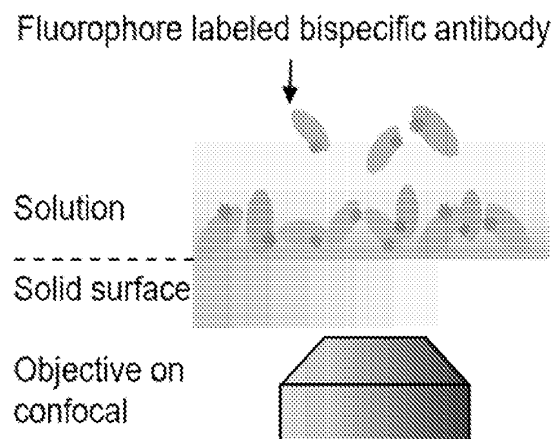

Figure 2

Proteins bind to solid surface in the absence of surfactant

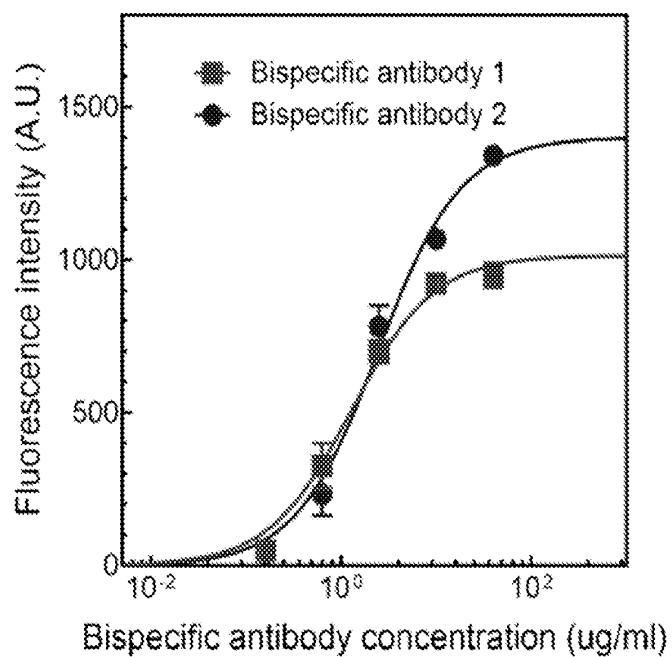

Figure 3

Screening of different surfactant

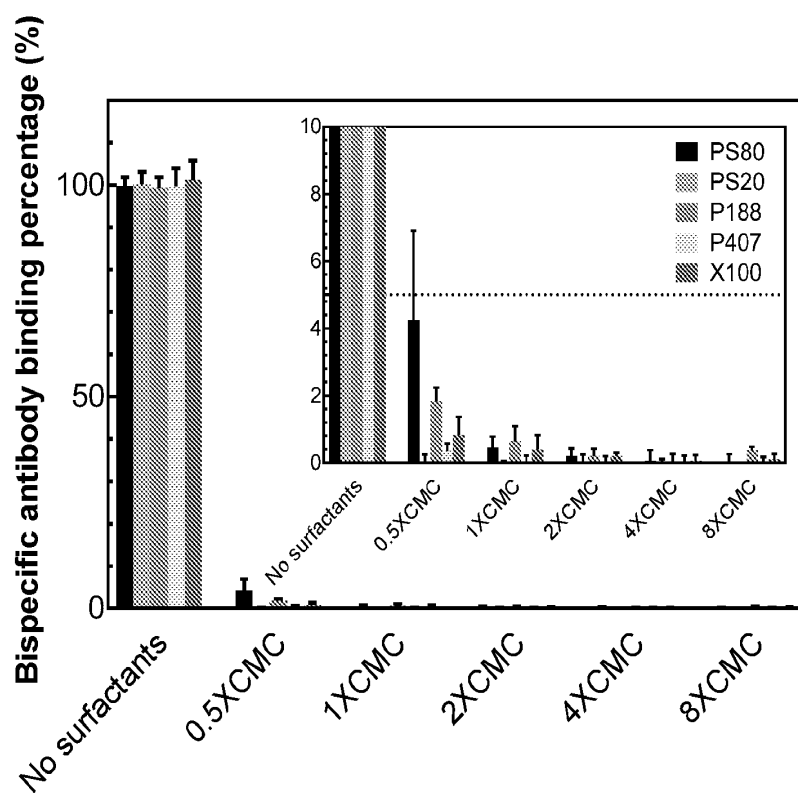

Figure 4

Adding surfactant to solid surface before adding protein prevents protein binding more efficiently

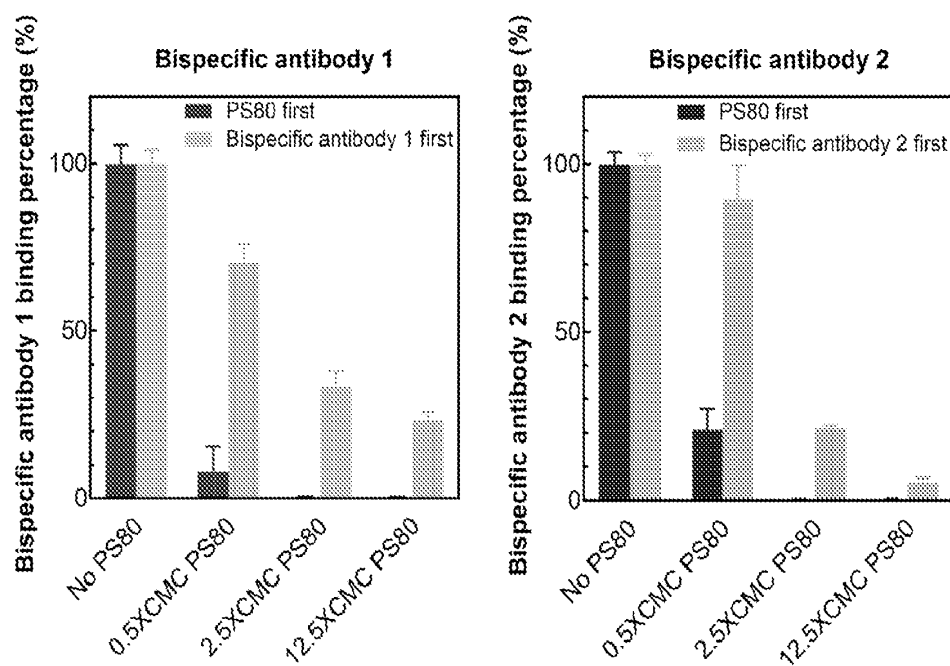

Figure 5

The impacts of different surfactants at the same concentration on leaching of DEHP

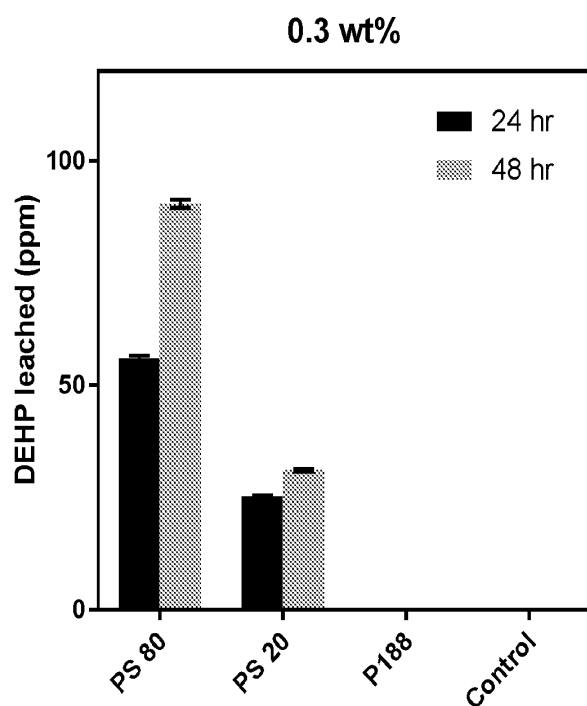

Figure 6

Compare the impacts of different surfactants at same folds of CMC on leaching of DEHP in 24 hrs
