

VOUCHER REVIEW METHOD AND SYSTEM

ABSTRACT

This specification provides a voucher review method and system. After at least one to-be-processed image voucher in a target scenario in a plurality of scenarios is obtained, to-be-reviewed information in the at least one to-be-processed image voucher can be extracted; based on a key review point that is of the target scenario and that is pre-stored in the voucher review system, the to-be-reviewed information and the key review point are input to a large language model; and the large language model can review the to-be-reviewed information based on the key review point to obtain a review result of the large language model for the at least one to-be-processed image voucher. The voucher review method provided in this specification can be applied to automated voucher review in a plurality of scenarios, thereby improving voucher review efficiency, reducing manpower costs, avoiding error-prone problems in a manual review, and improving user experience.
