(54) **Title:** METHOD OF UPDATING/MODIFYING A STAND ALONE NON-NETWORK CONNECTIBLE DEVICE

FIG. 1

(57) **Abstract:** A method and system is disclosed for updating/modifying/upgrading the system configuration of a stand alone non-network connectible device. The method is performed while a portable device is docked to the non-network connectible device. System configuration update information is embedded within the ordinary data content that is received from the portable device during the routine operation of the stand alone non-network connectible device. Upon receiving the embedded system configuration update information the non-network connectible device decrypts the embedded information and updates the system configuration accordingly. Generation of the embedded system configuration update information is performed in the portable docking device, and installation is performed on the non-network connectible device without requiring a network connection in the stand alone device.
