(54) **Title**: CAMERA, AND METHOD OF MANUFACTURING A PLURALITY OF CAMERAS

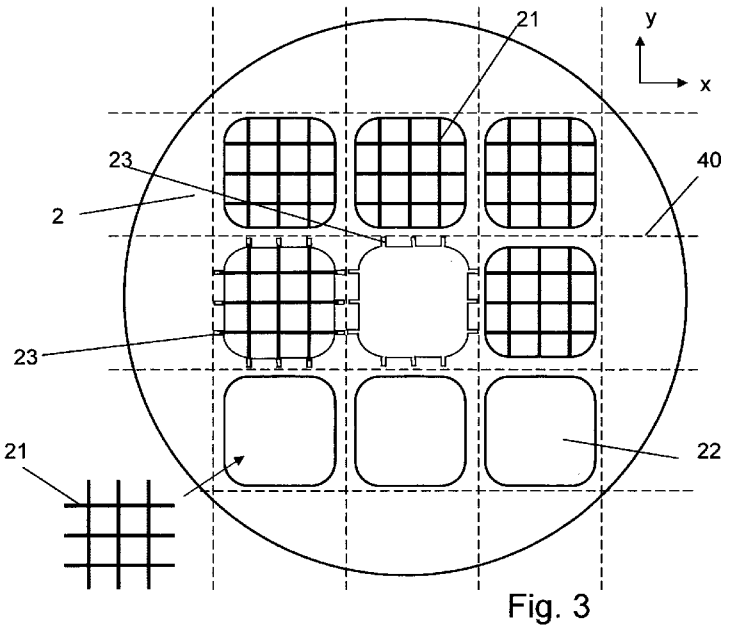

Fig. 3

(57) **Abstract**: In accordance with the invention, a camera or optical module for a camera is provided, the camera or optical module comprising: - a first substrate with a plurality of first optical devices, - a second substrate with a plurality of second optical devices, - and a spacer between the first substrate and the second substrate, the spacer having a first and a second attachment surface, the first substrate attached to the first attachment surface and the second spacer attached to the second attachment surface, - the spacer having a through hole from the first attachment surface to the second attachment surface so that there is an interior space between the first substrate and the second substrate, the interior space being hermetically closed off, - the first optical devices and the second optical devices being mutually arranged so that light impinging, from an object side, on a first optical device is directed to an assigned second optical device through the interior space, - the camera further comprising a screen device in the interior space, the screen device comprising one screening wall or at a plurality of screening walls, the screening wall(s) blocking off light portions from a first device from getting to a second device other than the assigned second device.
