

Personal ornament

ABSTRACT

When the supporting unit 14 is supported away from the flame unit 10 by a predetermined distance in the opening 10a of the flame unit 10, the rotational stick 24a and 24b are inserted in the rotatable state into the reentrant unit 26a and 26b described above.

the rotational stick 24a and 24b support the supporting unit 14 in the vicinity of a center of a center of gravity of the supporting unit 14 and the upper part end in up and down direction.

Thereby it is possible to keep the attitude in which the table surface of the jewelry unit faces to the front.
