

FINGER FIXING APPARATUS

ABSTRACT

A finger fixing apparatus includes a base (1), a scanner unit (5), and a finger press band (2). The base has a fingerprint read window (11). The scanner unit is arranged below the fingerprint read window. The finger press band extends above the fingerprint read window in a direction perpendicular to a finger inserting direction while ensuring a predetermined space (2a). The finger press band is positioned to correspond to the fingerprint read window.
