

[ABSTRACT]

Provided is a compound that exerts an anti-cancer action based on checkpoint kinase 1 (CHK1) inhibition. It was found that the following compound represented by
5 formula (1) or a pharmaceutically acceptable salt thereof has a potent inhibitory action against CHK1, and thereby exhibits an excellent anti-tumor action, which resulted in the completion of the present disclosure:

10 wherein R¹, L, V, W, Q, Ring A, Y^{1a}, Y^{1b}, Z^{1a}, and Z^{1b} is as defined in the description.
