

标题:

中文: 电子支付方法、计算机系统及装置

英文: ELECTRONIC PAYMENT METHOD AND APPARATUS, AND COMPUTER SYSTEM

摘要:

中文: 本说明书实施例提供了一种电子支付方法、计算机系统及装置。其中, 金额输入页和商户支付结果页由中间服务方统一提供。电子钱包在扫描商户的静态码之后, 将扫描得到的码信息发送至金额输入页。金额输入页基于接收的码信息和金额确定订单信息, 并将其发送至中间服务方。支付方复用原有流程, 从中间服务方中获取订单信息, 并基于订单信息执行支付操作, 向中间服务方发送支付结果通知。中间服务方将支付结果通知转换为调用收单方的支付确认请求, 并接收收单方反馈的商户支付结果。中间服务方通过商户支付结果页对商户支付结果进行展示。

英文: Embodiments of this specification provide an electronic payment method and apparatus, and a computer system. An amount input page and a merchant payment result page are centrally provided by an intermediate serving party. An electronic wallet sends code information obtained through scanning to the amount input page after scanning a static code of a merchant. The amount input page determines order information based on the received code information and an amount, and sends the order information to the intermediate serving party. A payer reuses an original procedure, to obtain the order information from the intermediate serving party, perform a payment operation based on the order information, and send a payment result notification to the intermediate serving party. The intermediate serving party converts the payment result notification into a payment confirmation request of an acquiring party, and receives a merchant payment result fed back by the acquiring party. The intermediate serving party displays the merchant payment result on the merchant payment result page.
