METHOD AND SYSTEM FOR SUBMITTING JOBS TO A REPRODUCTION CENTER

ABSTRACT

A method for submitting jobs to a reproduction centre, wherein document data representing documents to be printed are electronically transmitted from a client to the reproduction centre, is disclosed. The method comprises creating, on behalf of the reproduction centre, a submission form description (57) indicating print options currently available at the reproduction centre, said submission form description (57) being suited for electronic transmission to a client and for generating, on the side of the client, a submission form capable of being filled-in electronically by the client; upon receipt, from a client, of a job request including document data, creating an electronic document file and storing the document data therein and sending the submission form description (57) to the client, and upon receipt of the submission form retransmitted from the client with the job specifications filled-in, storing the job specifications in an electronic job ticket, linked to said document file.
