(54) Title: MANUFACTURE OF AN OPTICS PACKAGE		
(57) Abstract A method of making an optics package is described in which an exposed length of optical fibre (10) is deliberately subject to a predetermined bend. The relationship between the exposed length of the optical fibre and a distance between a location at which it is supported (P2) and a fixing point (P1) on an optical device (4) is determined taking into account the induced strain in the optical fibre. An optics package designed according to the method is also set forward.
