(54) Title: PLANTING PROCEDURE FOR THE CREATION OF WOODY CLIMATE-CARBON PLANTATIONS

Figure 2

(57) Abstract: The invention relates to a cost-effective planting procedure for the creation of woody climate-carbon plantations. Planting is performed using the seeds of woody plants integrated into biodegradable fabric, film or fleece. The biodegradable material is placed on the production area with a film laying machine commonly used in agriculture. Climate-carbon plantations serve climate protection purposes by the fact that their CO₂ emissions can be considered zero, they have no additional emissions, so the multi-purpose utilization of the plantation is carbon neutral. The produced wood can be used by the wood industry or for energetic purposes. Planting can also serve border protection purposes, or secondary re-cultivation purposes on damaged land, tailings and waste rock dumps, municipal waste landfills.
