- with international search report (Art. 21(3))
- before the expiration of the time limit for amending the claims and to be republished in the event of receipt of amendments (Rule 48.2(h))

(54) Title: NEST, SYSTEM

FIG. 1A

(57) Abstract: A nest may have a horizontal base forming a plurality of openings and a plurality of tubular members extending downwardly from the horizontal base. Each of the tubular members may have a side wall defining a well in communication with an opening of the plurality of openings. In some embodiments, the side wall has a counterbore extending from the opening at an angle relative to a longitudinal axis of the tubular member, the counterbore having an inner surface defining a continuous circumference or perimeter. In some embodiments, the side wall has an inner surface with an upper portion defined by a series of radii of curvature providing a continuously curved surface extending from the opening and reducing a diameter of the well.
