

A COUPLING DEVICE FOR A SADDLE BOX USED IN MOTORCYCLES**ABSTRACT OF THE DISCLOSURE**

5 A coupling device for a saddle box for a motorcycle comprises a box support,
mounted to a motorcycle's framework, a fastening plate and a suspension member.
The fastening plate is slotted and is in engagement with an engaging element to secure
the saddle box to the motorcycle. By pulling the fastening plate against a spring, the
fastening plate can be releasably removed from the engagement and the saddle box is
10 then removed.
