

BACKGROUND OF THE INVENTION

The present invention relates to footwear which is particularly suited for patients to improve the condition of their problem feet (E.g. Diabetic, sprained ankle, etc)

It is a well known fact that a patient with problem feet is very difficult to wear a normal shoe which might cause the condition to worsen, or even can't fit into one. Existing shoe maker will tailor make according to individual patient's foot size or shape, whereby "shoe fool" is design to suit all sizes of feet and patient can even choose and match different combination to come out with the type of pattern or look of the footwear they like, without tailor make required.

This save the trouble tailor making one footwear, and if foot, say for example, further swell or change shape, the patient have to tailor make another one.

However, if the patient wears a "shoe fool", no matter how big the foot swell or how the foot change shape, the same "shoe fool" can still fit in nicely for him. The present invention provides a unique footwear, which is particularly well adapted for people with foot problem or even for people who are concern about hygiene. It holds several advantages and superior features, which will be appreciated by those skilled in the art upon reading the following description of the invention with reference to its preferred embodiments.

SUMMARY OF THE INVENTION

The present invention provides a kind of footwear, which is one-size-fit-all. This means free-size footwear being able to fit nicely into different size, different shape or even different type of feet.

Additionally, "shoe fool" can be washed thoroughly where we emphasize on hygiene and therapeutic. Furthermore, shoe fool has a removable sole which gives convenience as the person does not need to remove whole shoe when, say for example, entering a house.

Also, "Shoe fool" is good for people with no feet problem. This is because "shoe fool" fits nicely into our feet, unlike traditional shoe which require our feet fit into the shoe. (This means that, "shoe fool" is free size, we do not need to worry about in-between sizes.)

These and other objects, features and advantages of the present invention will become more apparent and better understood to those skilled in the art from the following more details description of the preferred embodiments of the invention taken with reference to the accompanying drawings, in which like features are identified by like reference numerals.

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 to 7 are drawn NOT TO SCALE

FIG. 1 is an isometric view of the present invention when worn on a person's foot.

FIG. 2 is an isometric view of one type of **Foot Cover 11**.

FIG. 3 is a general view of another type of **Foot Cover 11**.

FIG. 4 is the side view of **Foot Cover 11** as illustrated in FIG. 3 when it is wrapped around a person's foot.

FIG. 5 is a top view (plan view) of **Removable Sole 12**.

FIG. 6 is the side view taken along line 1-1 of FIG. 5.

FIG. 7 is the side view of the **Removable Sole 12**, after attaching to **Foot Cover 11** worn on a person's foot.

DESCRIPTION

Turning generally to FIG. 1, the footwear of the present invention is made of 2 different parts, **Foot Cover 11** and **Removable Sole 12**.

Turning generally to FIG. 2, FIG. 3, FIG. 4 and FIG. 5, the **Foot Cover 11** of the present invention is elastic in nature, with its outer surface make of a special loop surface (**elastic Velcro, loop surface 21**), which can be easily held firmly to the special hook surface (**Velcro, hook surface 51**) on **Removable Sole 12** (for outdoor use), and later, can be easily detach away from **Removable Sole 12** (for indoor or "places with cleaner floor surface" use).

Foot Cover 11 can come with different type, although they serve the same purpose. The different types of **Foot Cover 11** are:

1. In forms of socks as illustrated in FIG. 2.

Turning generally to FIG. 2, a stretchable and strongly elastic clothe or fabric, with one side make of any comfortable, **socks making material 22**, and the other side make of an **elastic Velcro, loop surface 21** is used to make into socks, with the **elastic Velcro, loop surface 21** facing outside, so that when it is worn onto a feet, it can be stick, or attach, onto the **Velcro, hook surface 51** on **Removable Sole 12**.

2. In forms of bandage as illustrated in FIG. 3 and FIG. 4. (This design is more useful for people with swollen feet, sprained ankle, out-of-shape feet, etc...).
Turning generally to FIG. 3, a stretchable and strongly elastic cloth or fabric, with one side made of any comfortable, **elastic bandage making material 31**, and the other side made of an **elastic Velcro, loop surface 21** is used to make into bandage, with both ends of the **bandage making material 31** side sewed with a small stretch of **securing Velcro hook 32**. This bandage can then be wrapped securely onto the feet with the **elastic Velcro, loop surface 21** facing out, as illustrated in FIG. 4. The **securing Velcro hook 32** is then used to secure the bandage in place, by sticking it firmly and appropriately onto any area of the **elastic Velcro, loop surface 21**. The bandage comes in different lengths to suit individual needs. Methods to wrap bandage around feet can differ from patient to patient and from person to person, depending on needs and/or doctors' advises.

After putting on the bandage, as illustrated in FIG. 4, the whole **Foot Cover 11** can then be stick, or attach, onto the **Velcro, hook surface 51** on **Removable Sole 12**.

Turning generally to FIG. 5 and FIG. 6, the **Removable Sole 12** is a sole, with top part made of a **Velcro, hook surface 51**, to allow **Foot Cover 11** to attach to and detach away easily. The **Velcro, hook surface 51** is extended out at the heel portion, to form a **Securing extension 52**, to increase the bonding effect between **Foot Cover 11** and **Removable Sole 12** while normal walking. This **Securing extension 52** is flexible and therefore can be folded up to stick or attach to the **elastic Velcro, loop surface 21** on the **Foot Cover 11** when worn on a person's foot, as illustrated in FIG. 7.

This type of **Removable Sole 12** as described above comes in different sizes to suit people with different sizes of feet.

CLAIM

1. A footwear, comprising:
 Foot Cover defining as flexible and elastic enough to suit different size or shape or condition or type of feet; and
 Removable Sole defining as a sole with at least top surface easily attachable to and detachable from outer surface of said **Foot Cover**.
2. The footwear according to claim 1, wherein said **Foot Cover** is at least flexible enough to fold or crumpled into any shape for keeping convenience.
3. The footwear according to claim 1 and claim 2, wherein said **Foot Cover** will fit into any feet nicely, without any in-between size.
4. The footwear according to claim 1, claim 2 and claim 3, wherein said **Foot Cover** is washing machine washable.
5. The footwear according to claim 1, claim 2, claim 3 and claim 4, wherein said **Foot Cover** allow faster drying, as compared to normal shoe.
6. The footwear according to claim 1, claim 2, claim 3, claim 4 and claim 5, wherein said **Foot Cover** can fit into many different said **Removable Sole**.
7. The footwear according to claim 1, claim 2, claim 3, claim 4, claim 5 and claim 6, wherein said **Removable Sole** can fit into many different said **Foot Cover**.
