[0017] The output device 250 is a device that outputs various kinds of information and is used to present the various kinds of information to a user. In the embodiment, the output device 250 is achieved by a display device, such as a display. The output device 250 displays various kinds of display information to present the information to the user. The output device 250, however, may be achieved by an acoustic output device that outputs a sound, such as a voice and an electronic sound, as another example. In this case, the output device 250 presents the information to the user by outputting the sound, such as the voice and an electronic sound. A device applied as the output device 250 may be changed as appropriate according to a medium used for presenting the information to the user. Note that the output device 250 corresponds to one example of an "output unit" used to present the various kinds of information.

[0018] The input device 260 is used to receive various kinds of instructions from the user. In the embodiment, the input device 260 includes an input device, such as a mouse, a keyboard, and a touchscreen. The input device 260, however, may include a sound collecting device, such as a microphone, to collect a voice spoken by the user as another example. In this case, the collected voice is subjected to various kinds of analysis processes, such as an acoustic analysis and a natural language process, and thus, the content indicated by this
