

# LIQUID SUPPLYING DEVICE AND METHOD FOR DRAINING LIQUID THEREOF

## ABSTRACT

5           To improve liquid draining of a liquid supplying device. A method for draining a liquid of a pipe of a liquid supplying device including a step for drying an inside of the pipe by circulating an inert gas in the pipe without dividing the pipe, wherein the step for drying includes a step for protecting a pressure sensor from static electricity, through a pressure sensor that has a sensor covered portion electrically connected with a housing of  
10 the liquid supplying device, the sensor covered portion is exposed to the inside of the pipe or exposed to a flow path communicating with the inside of the pipe.
