

ABSTRACT

CONTROL SYSTEM FOR SPD DEVICE AND HOME AUTOMATION

A control system controls one or more appliances or devices and includes a remote control unit, or other device, to provide instructions for controlling the devices and appliances based on user input and other information provided to the remote control unit or other device. The other information may be information provided by sensors in the remote control device itself, or elsewhere, or information obtained by the remote control device from outside the remote control device. Information may be provided from outside the remote control device via a communication system and/or a computer system.
