ABSTRACT

This reinforcing bar binding machine comprises: a curl forming portion constituting an annular feed path for winding a wire around a reinforcing bar; and a tip guide part against which the reinforcing bar is abutted and which supports the curl forming portion. The curl forming portion is provided with an arm part for forming a curl in the wire, and a curl guide part for guiding the wire curled by the arm part. The tip guide part is provided with an abutting portion against which the reinforcing bar is abutted, an arm support part supported by the arm part, a curl guide support part supported by the curl guide part, and a body support part supported by a main body part.
