ABSTRACT

This application discloses a method and apparatus for displaying a virtual item, an electronic device, and a storage medium, and belongs to the field of computer technologies. A terminal displays a virtual scene and a target virtual object in the virtual scene (201), and displays a target virtual item in the virtual scene in response to a first trigger operation on at least two virtual items of a plurality of virtual items (202), thereby enriching a manner of controlling a virtual item, and improving the efficiency of human-computer interaction.
