

Abstract

Method of preparing filled cups made of cereal, in which method cooking-extrusion is used to produce at least one flat strip of cereal, hot-pressing is used to form at least one row of cavities in the extruded strip while it is still thermoplastic, transverse incisions are made in the strip between the cavities, a food filling is introduced into the cavities, and the strip is cut longitudinally while at the same time cutting off the ends of the transverse incisions, in order to obtain individual filled cups.
