

ABSTRACT

The present application relates to the field of network technologies, and in particular, to an account mapping method and apparatus based on address information, for establishing an association relation between different account systems. The account mapping method based on address information provided in an embodiment of the present application includes: extracting first address information respectively from multiple pieces of first account information provided by a first service provider, and extracting second address information respectively from multiple pieces of second account information provided by a second service provider; for each piece of extracted first address information, searching various pieces of extracted second address information for second address information matching the first address information; and after the second address information matching the first address information is found, establishing a mapping relation between the first account information to which the first address information belongs and the second account information to which the found second address information belongs.
