

Distribution board arrangementAbstract

5

A description is given of a distribution board arrangement having circuit breakers (10), residual current devices, which can be fastened in line with one another on an insulating housing (16), in which busbars (19) are accommodated. Fitted on the fastening side of the busbars (19) are contact elements (18) which can be connected to the busbars (19) by means of plug-in technology. Means (20,21,22) for ensuring polarization when plugging are provided on the fastening base and the insulating housing.
