(54) Title: MOVING MAP DISPLAY

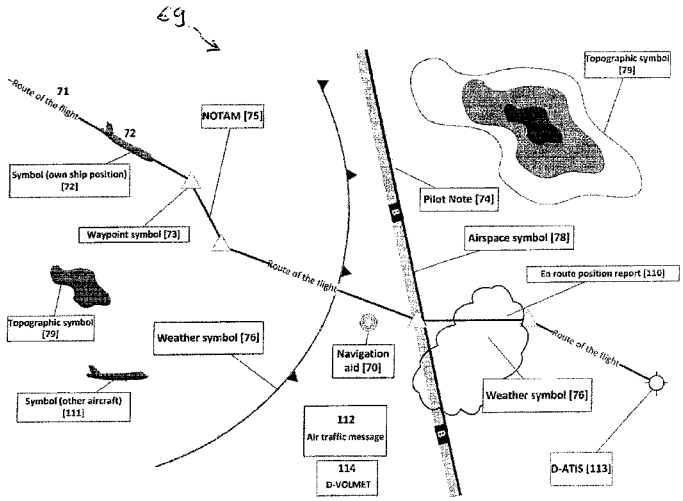

Fig. 7

(57) Abstract: A Device for automatically evaluating an air traffic control message by an aircraft-based component of a flight information system is disclosed. The device comprises means for retrieving the air traffic control message from an aircraft- based system, means for parsing the text of the air traffic control message and means for storing text elements of the air traffic control message into a computer readable memory. Furthermore, it comprises means for retrieving a current flight data of an aircraft, means for determining if there is a mismatch between the stored text elements and the current flight data, the actual flight data comprising at least the current position of the aircraft and means for displaying one or more graphical elements on a moving map display if it is determined that there is a mismatch between the stored text elements and the current flight data.
