

## ABSTRACT

## ROBOT

5           One aspect of the present disclosure provides a robot comprising a body portion, a  
forward drive portion that is provided in front of the body portion in a first direction, and that  
drives the robot in the first direction, and a rear drive portion that is provided behind the body  
portion in the first direction, and that drives the robot in the first direction, wherein the forward  
drive portion and the rear drive portion are configured to be relatively movable along a second  
10 direction perpendicular to the first direction.
