

Abstract

There has been a demand for a novel method for producing a steviol glycoside solution. There also has been a demand for a novel beverage precursor and a technique of suppressing the foaming of a steviol glycoside solution. The present invention provides a method for producing a steviol glycoside solution, comprising adding, to a solvent, steviol glycoside and 0.5 to 25 parts by weight of D-allulose per 100 parts by weight of the solvent.
