FINANCIAL TRANSACTION CONTROL SYSTEM, APPLICATION THEREFOR, AND FINANCIAL TRANSACTION CONTROL METHOD

Abstract

To provide a financial transaction control system preventing unauthorized use by a third party in financial transactions.

A financial transaction control system (100) in which an open secret code and a close secret code are set in a financial transaction processing application file (112) for each user account. Authentication of an open secret code by a user terminal (200) is required for opening a financial transaction processing application file (112). When financial transaction is received, an approval request is transmitted to the user terminal (200). The financial transaction control system (100) waits approval information and executes authentication of a close secret code in the approval information. The financial transaction data is transmitted to a payment management system (500) and close processing for closing the financial transaction processing application file (112) are performed.
