(54) Title: LENS ELEMENT

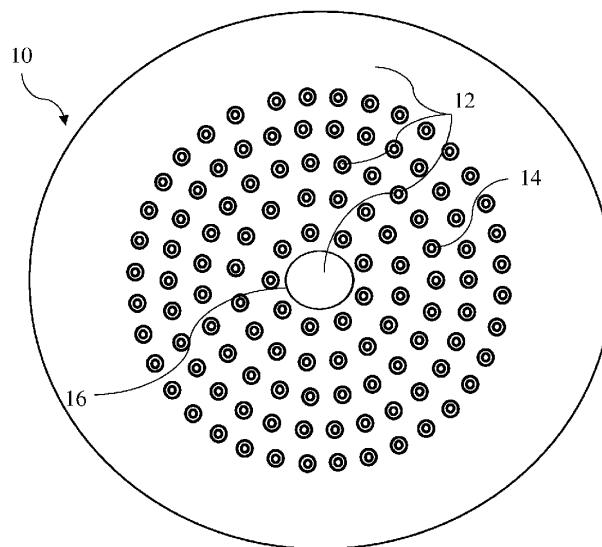

FIG. 1

(57) Abstract: A lens element intended to be worn in front of an eye of a wearer comprising: - a refraction area having a refractive power based on a prescription for said eye of the wearer; and - a plurality of at least two optical elements having an optical function of not focusing an image on the retina of the eye of the wearer, wherein the refraction area comprises a plurality of respectively independent island-shaped areas, the refraction area is formed as the area other than the optical elements and each refraction island shape area is within one optical element.
