**(54) Title:** TOUCHLESS DISPENSER

**Figure 1A**

(57) **Abstract:** The present disclosure is directed to touchless dispensers that include features that are adjustable or selectable to receive various sized and shaped dispensers. For example, the dispensers may include a container and a dispense portion (e.g., a spray mechanism, a pump mechanism, or some other dispense mechanism). The touchless dispensers include a controller in electrical communication with a sensor and an actuator. When the sensor detects an object, the sensor sends a signal to the controller, and the controller interprets and reviews the signal from the sensor. If the controller determines an object is present, the controller sends a signal to the actuator, and the actuator moves in response to push against the dispenser. The actuator pushing against the dispenser causes the dispense portion to be depressed and to be dispense or expelled out of the touchless dispenser.
