

ABSTRACT (FIG. 1)

"ELEVATOR GROUP CONTROLLER"

A group controller (11) includes a management
table (12) configured to manage hall calls separately
5 registered in a front hall and a back hall of each
floor, a demand determination unit (13) configured to
determine a demand of each floor, and an assignment
controller (14) configured to, when hall calls for the
same direction are registered in the front hall and
10 back hall of the same floor, assign both of the hall
calls registered in the front hall and back hall to one
of the elevators (22a-22d) or assign one of the hall
calls registered in the front hall and back hall to
another one of the elevators (22a-22d), depending on
15 the demand of the floor determined by the demand
determination unit (13).
