(54) Title: SYSTEM FOR PROPAGATING AIRLINE TPF DATA

(57) Abstract

A system and method for propagating airline computerized reservation system TPF data (10) to a relational database platform comprising a computerized reservation system transaction processing (12) source computer in communication with an output data file, an input data structure, a functional server (16) computer and a relational database management system target computer. The relational database management system target computer is in communication with the functional server (16) computer and an output database. A data propagation selection means (18) is resident within the transaction source computer and is in communication with the functional server computer (16) and target relational database management system target computer. A function management means is resident within the functional server (16) computer and is in communication with the transaction source computer and the relational database management system computer.
