

Abstract

Provided is a circularly polarizing plate having a neutral reflection hue. The circularly polarizing plate of the present invention includes a polarizer, a retardation layer, and a pressure-sensitive adhesive layer, wherein an angle formed between the absorption axis of the polarizer and the slow axis of the retardation layer is from 39° to 51°, and wherein at least any one of the polarizer, the retardation layer, or the pressure-sensitive adhesive layer contains a dye compound having, in an absorption spectrum thereof, a maximum absorption wavelength in a wavelength region of 650 nm or more.
