Abstract

The invention relates to an object arrangement comprising an object (1), in particular a sanitary object (1), which is secured to a fixing structure (2), wherein between the object (1), in particular its mounting surface (1a), and the fixing structure (2), in particular a fixing surface area of the fixing structure (2) opposite the fixing surface (1a), a spacer (3) is arranged, wherein the spacer (3) is formed from a transparent material, in particular from an uncoloured transparent material. The invention further relates to a method for securing an object (1) and the use of a plate made of a transparent material, in particular an uncoloured transparent material, preferably with clear, transparent edge surface areas (3a), as a spacer (3) when securing an object (1).
