

ABSTRACT

The present application provides an Android-based pop-up prompt method and device. The method includes the following: when a trigger event prompted by a pop-up is detected, launching an activity pop-up component to output the pop-up, 5 where a launch mode of the activity pop-up component is preconfigured as a single task mode; determining whether the activity pop-up component is obscured by another activity component; and when the activity pop-up component is obscured by another activity component, relaunching the activity pop-up component to trigger movement of the activity pop-up component to the top of an activity stack, so the 10 pop-up is displayed on a system front end. According to the present application, after the activity pop-up component is launched to output the pop-up to a user, it can be ensured that the pop-up is not obscured and is always displayed on the system front end.
