ABSTRACT

A laminated core (1) includes: a plurality of electrical steel sheets (10) that are laminated; and an adhesive portion (41) that is provided between the electrical steel sheets (10) adjacent to each other in a lamination direction and bonds the electrical steel sheets (10) together, in which the adhesive portion (41) includes a first adhesive portion (41A) that is provided in a first region (11) of the electrical steel sheets (10), and a second adhesive portion (41B) that is provided in a second region (12) different from the first region (11), and compressive stress remaining in the first region (11) where the first adhesive portion (41A) is provided is greater than compressive stress remaining in the second region (12) where the second adhesive portion (41B) is provided.
