(54) Title: SYSTEM AND METHOD FOR INTERACTIVE DRONE EXPERIENCE

FIG. 1

(57) Abstract: An entertainment system includes a drone configured to be maneuvered across a plurality of zones, an interactive toy device configured to be actuated to cause a plurality of toy reactions, one or more processors, and one or more non-transitory, computer readable media having instructions stored thereon. The instructions, when executed by the one or more processors, cause the one or more processors to determine a correlation between the drone and the interactive toy device, where the correlation is based on a proximity between the drone and the interactive toy device and at least one of: a location of the drone within a zone of the plurality of zones, an additional location of the interactive toy device within the zone or an additional zone of the plurality of zones, a non-position based physical attribute of the drone, or an additional non-position based physical attribute of the interactive toy device. The instructions, when executed by the one or more processors, cause the one or more processors to activate, based on the correlation, a toy reaction
