

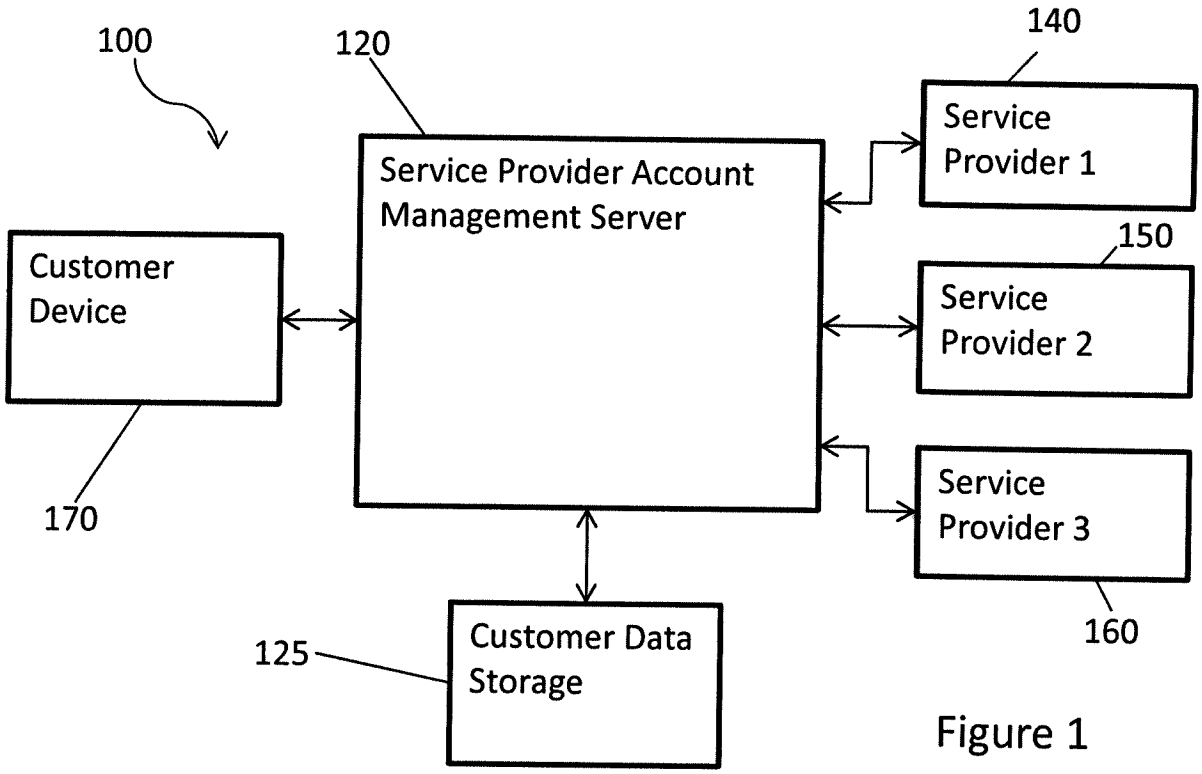

Figure 1

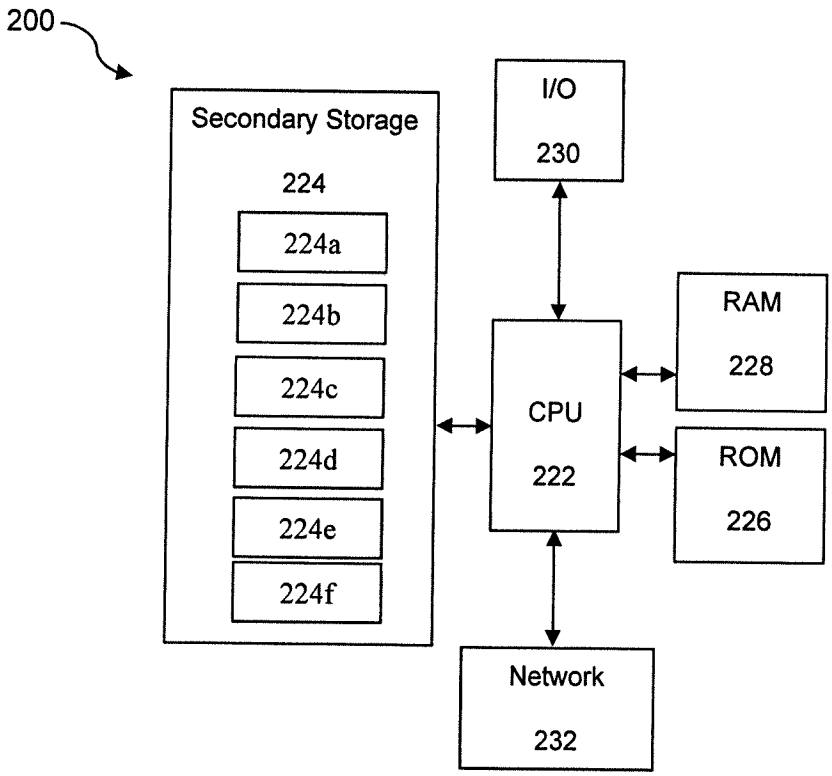

Figure 2

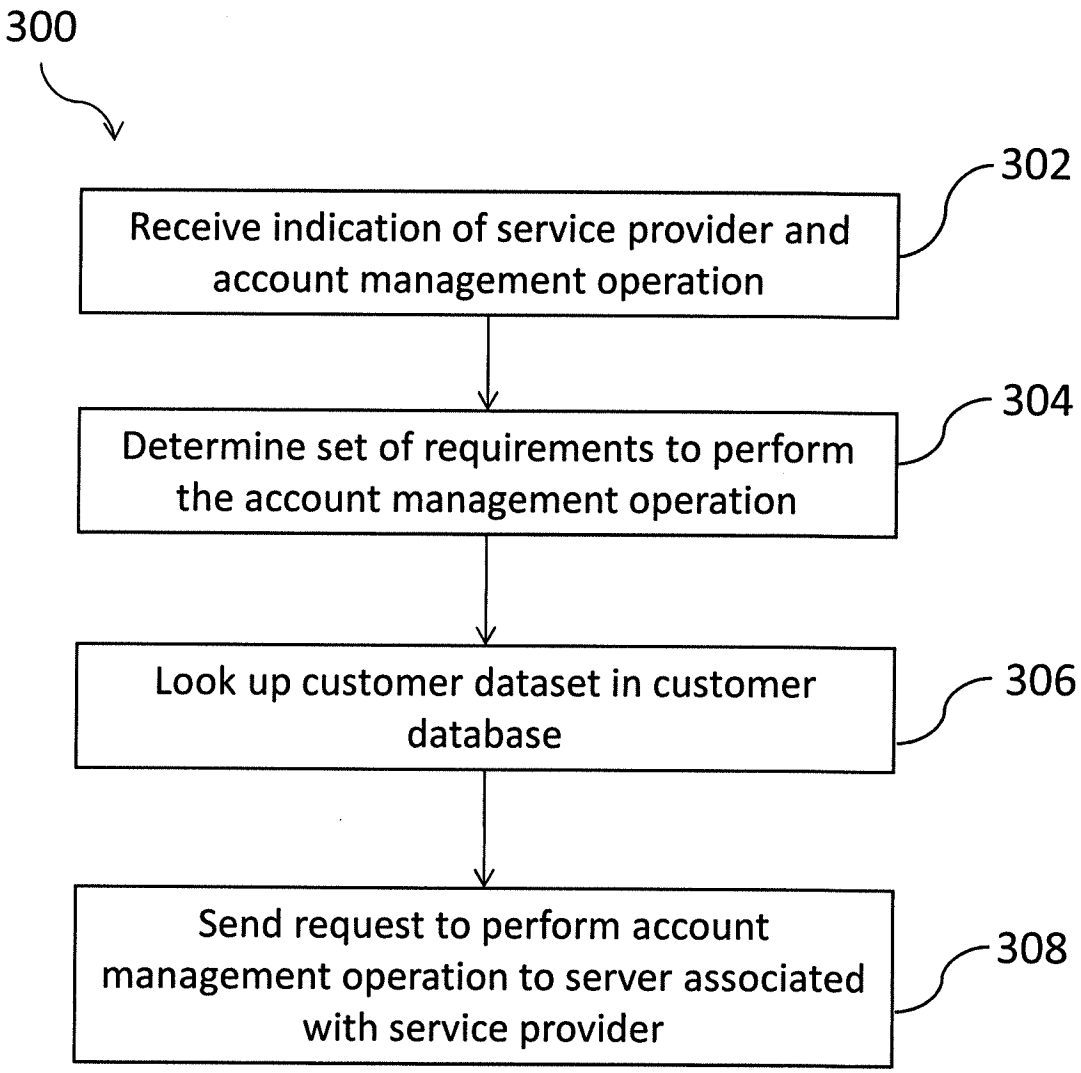

300
302
Receive indication of service provider and account management operation
304
Determine set of requirements to perform the account management operation
306
Look up customer dataset in customer database
308
Send request to perform account management operation to server associated with service provider

Figure 3

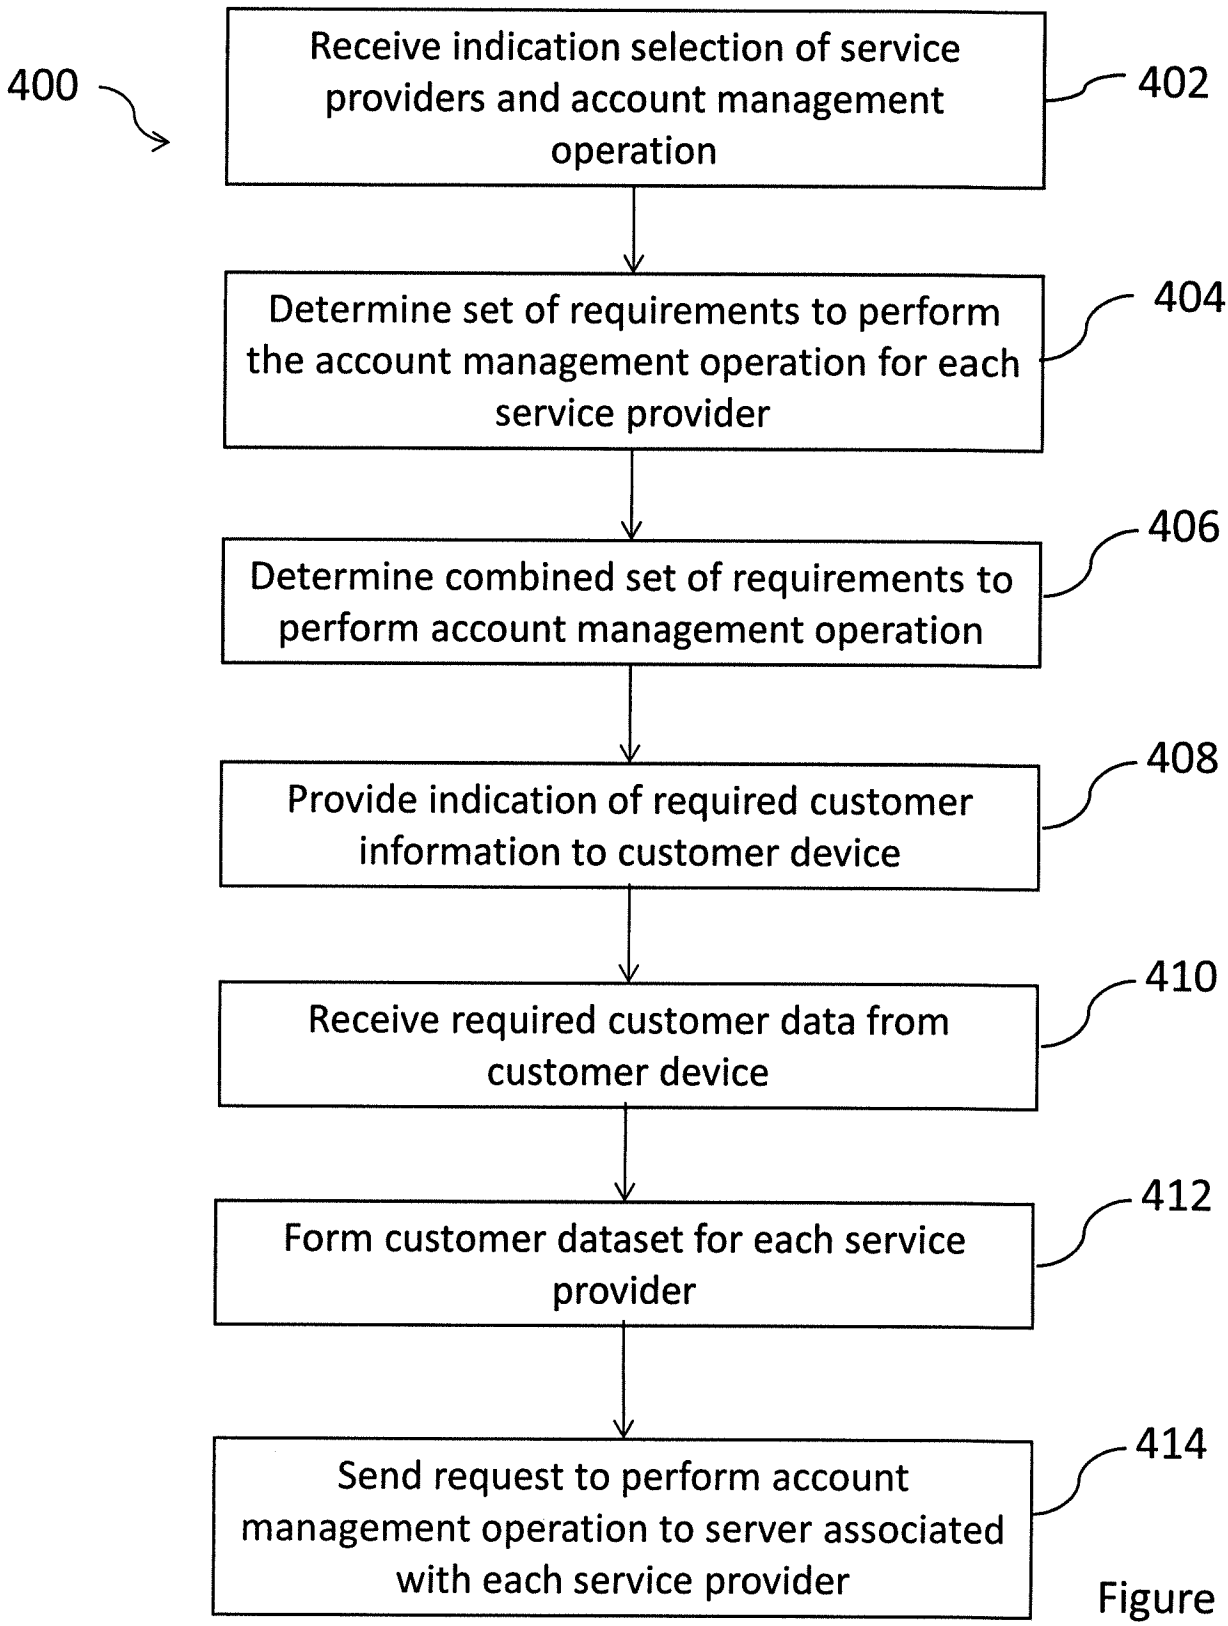

400
Receive indication selection of service providers and account management operation
402
Determine set of requirements to perform the account management operation for each service provider
404
Determine combined set of requirements to perform account management operation
406
Provide indication of required customer information to customer device
408
Receive required customer data from customer device
410
Form customer dataset for each service provider
412
Send request to perform account management operation to server associated with each service provider
414
