(54) Title: REFRIGERATOR

(57) Abstract

A bottom-freezer refrigerator comprises a generally rectangular box-like refrigerator housing (79) including a top division (81) and a bottom division (82) with an adiabatic partition wall (80) intervening between the top and bottom divisions. The top division (81) has a refrigerator chamber (83), a crisper chamber (84) and a low-temperature chamber (86). The bottom division (82) has a freezer compartment (92) defined therein. The bottom-freezer refrigerator of the structure described above also comprises a first cooler (95) provided in the top division (81) at a location spaced from a rear wall portion of the crisper chamber (84), a first circulating fan (96) disposed in the vicinity of the first cooler (95), a second cooler (97) provided in the bottom division (82), and a second circulating fan (98) disposed in the vicinity of the second cooler (97). The refrigerator chamber (83) and the crisper chamber (84) and the low-temperature chamber (86) are cooled by the first cooler (95) in cooperation with the first circulating fan (96), whereas the freezer compartment (92) is cooled by the second cooler (97) in cooperation with the second circulating fan (98).
