

Abstract

Selectable Image Capture and Transformation in a Digital Camera

A method for selectable image capture and transformation in a digital camera is disclosed. The method comprises capturing a plurality of images and dividing each of the plurality of images into a plurality of portions. Image data in each of the plurality of portions is then compared for each of the plurality of images. Image data for a selected one of each of the plurality of portions is then saved. All possible combinations of the plurality of portions of the plurality of images are compiled. At least one optimal combination is then determined.
