Abstract

CONTINUOUS WALL INSTALLATION METHOD AND CONTINUOUS WALL INSTALLING ATTACHMENT

A continuous wall installation method includes connecting a continuous wall installing attachment having a guide section which has the same shape as a connecting section of a steel sheet pile to the steel sheet pile so that the guide section is joined to the connecting section; installing the steel sheet pile in the water so that a portion of the guide section of the continuous wall installing attachment appears above the water surface; installing the other steel sheet pile in the water while the connecting section of the other steel sheet pile is connected to the guide section of the continuous wall installing attachment and subsequently to the connecting section of the steel sheet pile; and detaching the continuous wall installing attachment from the steel sheet pile.
