

ABSTRACT

STEEL PIPE SHEET PILE AND COMPOSITE WALL INCLUDING STEEL PIPE SHEET PILE

5

The steel pipe sheet pile (20) includes a steel pipe body (21) and a connecting member (22) extending in a longitudinal direction of the steel pipe body (21). The connecting member (22) defines a hollow portion (221) extending in the longitudinal direction, and a slit (222) extending in the longitudinal direction to
10 define a boundary plane (222S) between the hollow portion (221) and an outside. The boundary plane (222S) is slanted, in a cross section perpendicular to the longitudinal direction, with respect to a perpendicular line (221E) extending in a direction (221D) from a center (221C) of the hollow portion (221) through a center of the slit (222) toward the outside.
