(54) Title: INFANT CALMING/SLEEP-AID DEVICE AND METHOD OF USE

FIG. 7

(57) Abstract: An infant calming/sleep-aid device includes a main moving platform that moves in a reciprocating manner and an ac-
tuator that drives the reciprocating movement of the main moving platform. The moving head platform is linked to the main moving
platform and at least one of a motion sensing device and a sound sensing device are either at or proximate to a moving head platform
that is pivotally linked to the main moving platform. A logic circuit links at least one of the motion and sound sensing devices of the
infant calming/sleep aid-device to the main moving platform whereby signals detected modulate movement of the main moving plat-
form. A sound generating device is linked to the logic circuit.
